

## **Lab report no 8**

**Fall 2022**

**Computer System Programming Lab**

**Submitted By**

**Names**

**Muhammad Ali**

**Registration No**

**19pwcse1801**

**Section: A**

**Date:17,2,22**

**SubmittedTo:**

**MAM. Madiha Sher**

Department of Computer Systems Engineering  
University of Engineering and Technology, Peshawar

### Task no 1: -

In this task we simple implement 'ls' command which display the list of files or directories inside the specified directory.

**Code: -**

```
#include<stdio.h>
#include<unistd.h>
#include<error.h>
#include<sys/stat.h>
#include<time.h>
#include<dirent.h>
int main(int arg, char* av[]){

    DIR *dirp;
    struct dirent *dp;
    char * fname;

    if (arg==1){
        printf("ls for current working directory ");
        fname=".";
    }

    else
    {
        fname=av[1];
    }
    dirp=opendir(fname);

    if (dirp==NULL) {
        perror("failed to open directory: ");
    }

    while ((dp=readdir(dirp))!=NULL)
    {

        if (dp==NULL)
        {
            perror("can't read: ");
        }

        else
        {
            printf(" %s ",dp->d_name);
        }
    }
}
```

```

    printf("\n");
}
}

closedir(dirp);
return 0;
}

```

## Output: -

```

muhammad@muhammad-VirtualBox: ~/labs
muhammad@muhammad-VirtualBox:~/labs$ gcc lab8task1a.c -o lab8task1a
muhammad@muhammad-VirtualBox:~/labs$ ./lab8task1a
ls for current working directory sp

muhammad@muhammad-VirtualBox:~/labs$ cd sp
muhammad@muhammad-VirtualBox:~/labs/sp$ ls
ch#6 file.txt pipe.c stat.c
muhammad@muhammad-VirtualBox:~/labs/sp$

```

## Task no 2: -

Here I implement 'ls -l' which list out all files and directories with all information included in 'struct dirent \*' of inode table executing the program without argument run ls-l for current working directory but we can run ls-l for specific directory by mentioning at first command line argument.

### Code: -

```
#include<unistd.h>
#include <stdio.h>
#include <sys/stat.h>
#include <sys/types.h>
#include<stdlib.h>
#include<error.h>
#include<dirent.h>
#include<time.h>
#include<pwd.h>
#include <grp.h>
int main(int argc, char *argv[])
{
    struct passwd *pw;
    struct group *gp;
    DIR *mydir;
    char *c;
    int i;
    struct dirent *myfile;
    struct stat fileStat;

    if (argc==1)
    {
        printf("ls -l for cwd ");
        fname=".";
    }
    else {
        fname=argv[1];
    }
    mydir=opendir(fname);

    if (mydir==NULL)
    {
        perror("failed to open directory: ");
    }

    while((myfile=readdir(mydir))!=NULL)
```

```

{
    stat(argv[1],&fileStat);

    if (myfile==NULL)
    {
        perror("failed to directory: ");
    }
    if(stat(myfile->d_name,&fileStat)==-1)
    {
        perror("failed");
    }

    else {

        printf( (S_ISDIR(fileStat.st_mode)) ? "d" : "-");
        printf( (fileStat.st_mode & S_IRUSR) ? "r" : "-");
        printf( (fileStat.st_mode & S_IWUSR) ? "w" : "-");
        printf( (fileStat.st_mode & S_IXUSR) ? "x" : "-");
        printf( (fileStat.st_mode & S_IRGRP) ? "r" : "-");
        printf( (fileStat.st_mode & S_IWGRP) ? "w" : "-");
        printf( (fileStat.st_mode & S_IXGRP) ? "x" : "-");
        printf( (fileStat.st_mode & S_IROTH) ? "r" : "-");
        printf( (fileStat.st_mode & S_IWOTH) ? "w" : "-");
        printf( (fileStat.st_mode & S_IXOTH) ? "x" : "-");
        printf(" ");

        printf("%ld ",fileStat.st_nlink);
        pw=getpwuid(fileStat.st_uid);
        printf("%s ",pw->pw_name);
        gp=getgrgid(fileStat.st_gid);
        printf("%s ",gp->gr_name);
        printf("%4ld ",fileStat.st_size);
        c=ctime(&fileStat.st_mtime);

        for(i=4;j<=15;j++)
            printf("%c",c[j]);
        printf(" ");
        printf("%s\n",myfile->d_name);
    }
}
closedir(mydir);
return 0;
}

```

Output: -

```
muhammad@muhammad-VirtualBox:~/labs$ ./lab8task2b
